

Name: _____

Date: _____

Directions: *Circle or briefly write the best answer for each question.*

- 1) True False A harmless gas, such as nitrogen, is always harmless, even in high concentrations.
- 2) True False Empty gas cylinders must be secured at all times to prevent tipping.
- 3) True False If a gas cylinder is connected to a regulator, it may be group chained/secured.
- 4) True False Before the first use of any gas cylinder the regulator must be properly greased and oiled.
- 5) True False Rapid release of pressure from a gas cylinder can turn it into a deadly projectile.
- 6) True False Pointing a compressed air nozzle at someone is a great way to get his/her attention.

- 7) Compressed gas cylinders should not be stored:
 - a. In high traffic areas
 - b. Near sparks or flames
 - c. In poorly ventilated areas
 - d. All of the above

- 8) If you find a compressed gas cylinder without a label or with a worn label, you should:
 - a. Contact the supplier for pick-up
 - b. Make your best guess based on cylinder color
 - c. Attach regulator and test the gas
 - d. Check the purchase order

- 9) If a cylinder valve or fitting is difficult to work with, you should:
 - a. Apply oil or grease
 - b. Apply as much force as you possibly can
 - c. Discontinue use and contact the supplier
 - d. A and B

- 10) Which of the following hazards are associated with compressed gas cylinders?
 - a. Asphyxiation
 - b. Combustion
 - c. Inhalation of toxic gases
 - d. All of the above
